

ASHFAH ASHRAF

PYTHON FULLSTACK DEVELOPER

+91 9497511242 | ashfahashraf@gmail.com | linkedin.com/in/ashfah-ashraf
github.com/ashfahashraf | Bengaluru, India

PROFESSIONAL SUMMARY

Python Full Stack Developer proficient in designing and developing scalable web applications using Django, React.js, and REST APIs. Experienced in building end-to-end systems with frontend development, backend services, and database integration (MySQL, MongoDB). Skilled in CRUD operations, RESTful API development, authentication, and responsive web design. Strong knowledge of Data Structures, OOP, and problem solving, with hands-on experience integrating AI features using Hugging Face Transformers. Eager to contribute to building high-performance and user-focused applications.

TECHNICAL SKILLS

- **Programming Languages:** Python
- **Frontend Technologies:** HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Bootstrap, Tailwind CSS
- **Backend Frameworks:** Django, REST APIs
- **Databases:** MySQL, MongoDB, SQLite
- **Libraries & Tools:** Pandas, OpenPyXL, SMTP, Multithreading, PyInstaller
- **Developer Tools:** Git, GitHub, Version Control, GitHub Copilot, Jira, Linux
- **Core Computer Science:** Data Structures, Algorithms, OOP, Problem Solving
- **AI Tools:** Hugging Face Transformers

PROJECTS

CraftHover – AI-Powered Handicraft Marketplace

[GitHub Repo](#)

Technologies: Python, Django, HTML, CSS, Bootstrap, JavaScript, Hugging Face Transformers, Chart.js

- Built CraftHover, a full-stack marketplace platform connecting artisans and customers for buying and selling handcrafted products.
- Developed artisan-side system with dashboard, product management, order tracking, and profile management.
- Implemented customer-side features including product browsing, search, wishlist, cart, and order management.
- Designed a responsive UI using Bootstrap with modern layouts and interactive components.
- Integrated AI-based product description generator using Hugging Face Transformers for automated content creation.
- Developed real-time cart system with dynamic pricing and shipping calculation.
- Implemented analytics dashboard using Chart.js to track orders, revenue, and product performance.

YAKUZAA – Game Center Management System

[GitHub Repo](#)

Technologies: Python, PyQt6, SQLite, Pandas, OpenPyXL, SMTP, Multithreading, PyInstaller

- Built YAKUZAA, a desktop management system for arcade and gaming centers to manage sessions, billing, and revenue tracking.
- Developed an interactive desktop GUI using PyQt6 with custom QSS styling for a modern dark-mode interface.
- Designed an offline-first architecture using SQLite (WAL mode) to ensure uninterrupted operation without internet connectivity.
- Implemented multithreaded session management to track real-time timers for multiple gaming stations.
- Created an automatic crash recovery system that restores active sessions after power failures.

- Automated revenue reporting using OpenPyXl and SMTP to generate Excel dashboards and email daily reports.

EDUCATION

- **Python Full Stack Development Training**

BLearn Academy

Sep 2025 - Present

On-site

- **B.Tech in Computer Science and Engineering**

July 2021 - April 2025

Vimal Jyothi Engineering College

CERTIFICATES

- **Python for Beginners: Learn Python Programming (Python 3)** — Python SpringBoard
- **Python for Data Science** — IIT Madras (NPTEL) | Elite + Silver Badge
- **Introduction to Front End Development** — Simplilearn
